

Free offer to the Residents of Suffield Township

We all know the importance of smoke detectors and changing the batteries in them when we change our clocks in the Spring and Fall. It is critical that you also check for the proper operation of your smoke alarm. It is important to remember that pressing the test button only lets you know that the alarm has power and that the alarm horn sounds. It does NOT test the sensor itself. The Suffield Fire Department is offering a program to come to your home with an aerosol can of test smoke to properly test your smoke alarm to ensure that it is *properly* operating. If you would like to have your smoke alarm tested, please call us at the fire station at 330-628-9240 to schedule a convenient time.
